

LearningWorks

LearningWorks classroom was established in Leppävaara campus in 2011. Designed to primarily join all participants to actively engage themselves in the classroom's topic. The room has a SmartBoard and tablets all connected by an application. Students share from their tablets text, pictures and drawings to the SmartBoard with applications. The traditional desks of a classroom have been replaced with smaller easy to move around tables, letting the participants arrange their working space as they please.

LearningWorks was designed by Merja Bauters's team, Information and Communication Technology
